

DAISY MACLENNAN

FRONT END DEVELOPER

I am a motivated individual with a desire to progress and improve myself, and the products I am developing. I put my body and soul into my work, regularly suggesting new ideas and refactoring code to contribute to better solutions. I believe that having a good quality of code will better a company's developer experience and lead to a quicker roll out of features, therefore, I like to make that a priority.

FRONT END DEVELOPER, HULER

- Implementing features from scratch, adhering to user stories set out by a product team.
- Building complex user interfaces in React.js, Next.js or Vue. Bringing bespoke designs to life using animation libraries such as Framer Motion or React Spring.
- Investigating and solving bugs from the QA team.
- Self managing tasks and communicating updates in Jira.
- Independently working to improve the general condition of our codebases including the conversion from JavaScript to TypeScript of one of our larger systems.
- Providing junior colleagues with in-depth code reviews and helping them solve more difficult problems.

SOFTWARE ENGINEER, ACCEDO

- Building accessible video streaming interfaces in React.js for use on remote controlled devices such as Smart TV s or gaming consoles.
- Making use of Android Studio for testing purposes.
- Optimising the codebase to ensure optimum experience on legacy devices.

SOFTWARE ENGINEER, DISTINCTION

- Responding to tickets, giving updates and discussing new features with retainer clients.
- Applying bug fixes and adding new pages/features in Kentico CMS, WordPress and Vue.js.
- Assisting project managers in planning a high value project using Jira.
- Leading in the creation of user stories for a high value project.
- Applying bug fixes and adding new pages/ features using Kentico CMS.

APPRENTICE DEVELOPER, SI DIGITAL

- Facilitating and formatting requirements in an agile manner.
- Developing accessible user interfaces to fit a design specification using WordPress, React.js, Gatsby and Next.js.
- Designing and developing mySQL databases to be suitable for a websites needs. Implementing new features to existing websites.
- Building RESTful API endpoints to retrieve and store data.
